If a solar panel that is characterized for 12V is applied with a 6V battery, the maximum current must be reduced to about 0.7A: e.g. battery voltage = 6V, solar panel voltage = 18V. $P = (18V - 6V) * 0.7A = 9.6W$. In this case, the solar panel power may not exceed 10W. When charging, the heat sink normally runs warm.
