Both monocrystalline and polycrystalline solar panels serve the same function, and the science behind them is simple: they capture energy from the sun (solar energy) and turn it into electricity. They're both made from silicon; many solar panel manufacturers produce monocrystalline and polycrystalline panels.

Tindo Solar Panels using polycrystalline cells. When solar PV first boomed in Australia in 2009-2010, monocrystalline solar panels were thought to be superior to polycrystalline solar panels. There were several reasons for this thinking. Monocrystalline solar cells have historically had a higher peak efficiency and were more readily available than ...
