3kW solar system is a powerful system that can run household appliances. This solar system is capable to generate 3000W/h electricity. 3kW solar system is the best fit for those who are looking for a complete solar solution for home including solar battery and solar inverter.

Step 4: Choose the right Solar Charge Controller. Whether you opt for a PWM charge controller or an MPPT charge controller, three specifications must be considered to ensure you choose the right controller your system: . Output Current rating (Amps): This represents the maximum amps the controller can output.

Inverter watt load / solar panel watt output + 10% = solar panel array. In this example we will use a 300 watt solar panel: $2500 / 300 = 8.3$. $8 \times 300 \text{ watts} = 2400 \text{ watts}$. Add 10% and you get 2640 watts. Round that figure off to 2700 watts. $9 \times 300 = 2700$. A 9 x 300 watt solar array can run a 2500W inverter load, even with energy losses factored in.

The range includes 1200W solar panel kits, 1800W solar panel kits, 2400W solar panel kits and 2700W solar panel kits.
