I guess it depends on what your goal is. 48V systems aren't common in this kind of off grid application because of conversion efficiencies. Most systems in an RV can operate on 12V directly, so to convert battery voltage to AC, then AC back to 12V is only costing you extra Ah for no useful benefit.

Allied Battery's versatile lithium battery conversion solution allows users to convert 48V lead-acid to a full lithium golf cart set up. Choose from 2 x 48V 30Ah (30Ah) all the way up to 8 x 48V 30Ah (240Ah) lithium golf batteries for maximum range. ... Similarly, a typical 48-volt golf car will use either eight 6-volt batteries or four 12-volt ...

The reserve capacity is the number of minutes that the battery can power the car at the minimum amount needed if the alternator should stop functioning. It is measured at 80° F at a discharge rate of 25 amps. The battery must be able to maintain at least 10.5 volts for a 12-volt battery, which is the minimum amount needed to power the car.

C-rate of the battery. C-rate is used to describe how fast a battery charges and discharges. For example, a 1C battery needs one hour at 100 A to load 100 Ah. A 2C battery would need just half an hour to load 100 Ah, while a 0.5C battery requires two hours. Discharge current. This is the current I used for either charging or discharging your ...

DURABILITY: The Trojan TR GC2-48-G lithium-ion batteries was designed to handle the bumps and jolts of daily life, and it has been tested for off-road durability and to automotive standards (SAE). This battery Lasts 2-3X longer than lead-acid batteries and has an 8-year warranty.. **MAINTENANCE FREE:** The Trojan TR GC2-48-G lithium-ion batteries deliver a hassle-free ...
