To achieve a 48V battery pack, you must connect these cells in series. Series Configuration. In a series configuration, the total voltage of the battery pack is the sum of the individual cell voltages. For a 48V pack, you will need: Number of cells in series= $48V/3.7V=13$ cells Therefore, you need 13 cells in series to achieve the desired 48V.

The Importance of 48V in Battery Technology. The Importance of 48V in Battery Technology. When it comes to battery technology, voltage plays a crucial role in determining the performance and capabilities of a battery pack. And one voltage that has gained significant importance in recent years is 48 volts (48V).
