There is a great case for energy storage to be made in off-grid electrical systems. Of course, the addition of energy storage does not come without complications. With the addition of another energy resource the complexity of system design and complexity can increase far beyond solar and generators or generators alone.

Plus, when it's integrated with battery storage, it can provide reliable energy even when the electrical grid goes down. Plus, possible new funding for the Self Generation Incentive Program (SGIP) (which provides battery storage rebates to SCE, PG& E and SDG& E customers) could further incentivize homeowners to pair solar power with energy storage.
