The battery connectors appear identical to the stock parts in every respect, fit easily and worked well in my 189. They are very expensive for a few bits of bent metal, but Fluke can't (or won't) supply the parts so this is the only way to bring a meter that has had a severe battery leak back from the dead.

Load the battery with about 6 ohm resistor (that will load the batter by somewhat 250 mA, somewhat like a bike light would draw.). Connect the resistor in parallel to the multimeter. The multimeter should show the voltage enough for a typical device to operate (most of them stop working at around 1.2 V or about).
