Although the rare earths have been around since the formation of Earth, their existence did not come to light until the late 18th century. In 1787 the Swedish army lieutenant Carl Axel Arrhenius discovered a unique black mineral in a small quarry in Ytterby (a small town near Stockholm). That mineral was a mixture of rare earths, and the first ...

Since the idea of “liquid metal batteries” was introduced, lithium-based liquid metal batteries have gained new interest due to the pressing need for grid energy storage. Lithium batteries often have high energy densities since lithium is the least dense metal and has the lowest redox potential of all the elements.

Of particular concern are indium, used in touch screens and liquid crystal displays, and rare earth elements (REEs) particularly neodymium and dysprosium, used to fabricate highly efficient ...
