Two variations in capital cost are juxtaposed for the business case of domestic ALA battery systems, with results presented for the applicable market scenarios still including a CM annual payment. A high-cost (&#163;100/kWh for batteries and &#163;900 per inverter) and low-cost (&#163;80/kWh for batteries and &#163;300 per inverter) comparison is presented in Fig. 21 and Fig. 22 .

In the near future, a large volume of electric vehicle (EV) batteries will reach their end-of-life in EVs. However, they may still retain capacity that could be used in a second life, e.g., for a second use in an EV, or for home electricity storage, thus becoming part of the circular economy instead of becoming waste. The aim of this paper is to explore second life of EV ...
