You need to divide the value by 10,000 to get the charging current in Amps. To get the charging power (in Watts) you multiply the current (in Amps) by the voltage, which is almost certainly going to always be 20V. In my case:  $(9566 / 10,000) * 20V = 19.1W$ . This validated by measuring the charging rate using my First USB power meter.

This will generate a battery health report in the form of an html file called battery-report.html. The file location will be shown in the Command Prompt window, so take note of it, and navigate to its location in Explorer. ...
