Lithium-ion chemistry performs well at elevated temperatures but prolonged exposure to heat reduces battery life. Li-ion batteries offer good charging performance at cooler temperatures and may even allow "fast-charging" within a temperature range of 5 to 45 °C (41 to 113 °F). [73] [better source needed] Charging should be performed within this temperature range. At temperatures ...

Batteries can explode through misuse or malfunction. By attempting to overcharge a rechargeable battery or charging it at an excessive rate, gases can build up in the battery and potentially cause a rupture. A short circuit can also lead to an explosion. A battery placed in a fire can also lead to an explosion as steam builds up
