Remember that it is important to use only distilled or demineralized water when refilling a battery. Tap water or other impure sources can contain minerals and impurities that can damage the battery and reduce its performance. Once the battery has been refilled and all cells are topped up, it is time to reconnect the battery for further use.

The electrolyte in your battery is a mixture of sulfuric acid and water. Battery water, on the other hand, is the clean water used to refill the electrolyte when its levels run low. The water used in battery water is usually distilled water or deionized water. It's never tap water, as tap water may contain impurities. What Does Battery Water Do?

Got a nice stream of water draining from behind the rear tire. However, I still had water spilling over onto the headliner. Hopefully it is just from the volume of water i poured in that the drain couldnt handle it all at once.

Battery hole cover has water
