Battery and Charging. The battery of the Tesla Model X Long Range has a total capacity of 100 kWh. The usable capacity is 95 kWh (estimate). A range of about 275 miles is achievable on a fully charged battery. The actual range will however depend on several factors including climate, terrain, use of climate control systems and driving style.

Battery price model and specification

Preceding model. The model shown on this page is the successor of the Mercedes-Benz EQC 400 4MATIC, which was available to order from July 2019 until November 2020. The previous model had similar range, same acceleration and was similar in energy consumption. Preceding model Mercedes-Benz EQC 400 4MATIC

One common operating mode is the grid-tied mode, where the battery storage system is connected to the electrical grid. In this mode, the battery system can store excess energy from the grid or renewable sources and discharge it when needed, reducing reliance on the grid during peak demand periods. Grid-tied systems are often chosen to optimize energy usage, increase ...

The model shown here is the replacement of the old Standard Range Plus variants. It is fitted with a slightly larger LFP battery (variant E6LR), which results in more range. Some specifications shown are based on estimates as Tesla does not disclose ...

updated and changes may be made to the specifications at any time.
