A solar module comprises six components, but arguably the most important one is the photovoltaic cell, which generates electricity. The conversion of sunlight, made up of particles called photons, into electrical energy by a solar cell is called the "photovoltaic effect" - hence why we refer to solar cells as "photovoltaic", or PV for short.

Rainy states in the United States like Hawaii or Louisiana won't be a good choice for solar panel installation. Power generation from solar panels depends on seasons as well. In summer, the panels would get more sunlight and can produce more power while in winter, panels won't be able to generate enough energy to meet needs.

Solar battery costs have fallen by 97% since 1991, according to Our World In Data. That means the same 5kWh lithium-ion battery that now costs you \$2,000 to install at the same time as a solar panel system would've set you back \$66,700 in 1991.

Here's a list of the top 7 disadvantages of solar energy.
