The Victorian Big Battery will contribute to the modernisation of the Victorian electricity network and will be instrumental in helping the State reach its target of 50% renewables by 2030. Independent analysis predicts that for every \$1 invested the battery will deliver \$2.40 in benefits to Victorian households and businesses. The battery has also brought a significant ...

In this video, I'm giving examples of how to size a solar system: how many panels and how big a battery should be, all calculations based on real data from a...

A basic JK Jikong BMS Installation tutorial by Big Wei Battery Feel free to comment and ask any questions to our technician Welcome to our Brisbane store or s...

LiFePO<sub>4</sub> batteries behave differently than other battery chemistries. The relationship between voltage and capacity is not linear. For example, if you have a voltage between (13.3 - 14.6) or (26.6 - 29.2) or (53.6 - 58.4) you will have more than 99% of the capacity. This essentially means that "bubble voltage" contains less than 1% of the entire capacity and the drop when a load is ...

A battery with a high energy density has a longer battery run when compared to its size. But if the energy density is too high, it could present a safety issue due to the presence of more active material packed into a cell. This increases the risk of a thermal event. For example, The Tesla Model S battery with 85kWh capacity weighs 540kg.
