**Step-by-Step Guide for a 3,000-Watt DIY Solar Power Generator.** The core concept behind this DIY solar generator design was high output capacity and good levels of convenience without excess bulk. We wanted to build a DIY solar generator to bridge the gap between dinky overnight suitcase models and humongous industrial-strength types.

An on-grid solar system is an electrical generator using solar energy, a non-conventional source of energy. In contrast with off-grid systems, grid-tied systems are connected to the grid. As a consequence, the not used generated power of the system can be sold to the electrical company. In addition, the user can buy energy from the grid if needed.
