The charging pile is fixed on the ground, uses a special charging interface, and adopts the conduction method to provide AC power for electric vehicles with on-board chargers, and has corresponding communication, billing and safety protection functions. Citizens only need to buy an IC card and recharge, then they can use the charging pile to charge the car

The AC charging pile directly provides AC mains power and uses a vehicle mounted charger to charge the power battery. 7,8 Generally, the AC charging pile has a small power (about 10 kW) and a long charging time. Due to its small size and small carbon footprint, it can be installed in every corner of the city.

What are Charging Piles? Charging piles, also known as electric vehicle supply equipment (EVSE), refer to standalone units designed specifically for recharging electric vehicles. They can be found in various settings such as residential areas, commercial buildings, and public locations like parking lots or along roadsides.
