When working with Electronics circuits, there are many times in which you may need a capacitor to help smooth out, filter or store electrical charge. In such times, a 1000 m F 16V Electrolytic Capacitor is ideal for low frequency signals, to reduce the effects of ripples, surges as well as sudden drops in current. With a capacitor, these differences in current are stored, controlled ...

Capacitor is a component which has the ability or "capacity" to store energy in the form of an electrical charge producing a potential difference (Static Voltage) across its plates, much like a small rechargeable battery. In a way, a capacitor is a little like a battery. Although they work in completely different ways, they both store ...
