In a cardiac emergency, a portable electronic device known as an automated external defibrillator (AED) can be a lifesaver. A defibrillator (Figure (PageIndex{2})) delivers a large charge in a short burst, or a shock, to a person's heart to correct abnormal heart rhythm (an arrhythmia). A heart attack can arise from the onset of fast, irregular beating of the heart--called cardiac or ...

Capacitor banks reduce the phase difference between the voltage and current. A capacitor bank is used for reactive power compensation and power factor correction in the power substations. Capacitor banks are mainly used to enhance the electrical supply quality and enhance the power systems efficiency. Go back to the Contents Table ? . 2.

Since capacitors have a leading power factor, and reactive power is not a constant power, designing a capacitor bank must consider different reactive power needs. For example, the configuration for a 5-stage capacitor bank with a 170 KVAR maximum reactive power rating could be 1:1:1:1:1, meaning 5*34 KVAR or 1:2:2:4:8 with 1 as 10 KVAR.
