Capacitance unit conversion is a crucial aspect of working with capacitors in electrical engineering and electronics. Capacitance, measured in farads (F), represents the ability of a capacitor to store electrical charge per unit voltage. However, farads are often too large a unit for practical use in everyday electronics due to the relatively small capacitance ...

Question: Convert the circuit to s-domain, assuming zero initial capacitor voltage and zero initial inductor current. Derive $V_{out}(s)$ of the s-domain circuit. It will be expressed by $V_{in}(s)$ and a fraction involving "s". Keep variables like R, L and C in your equations (you don't need to plug in actual values of them).
