0 parallelplate  $Q = AC|V|$   $d = e \dots ?$  (5.2.4) Note that  $C$  depends only on the geometric factors  $A$  and  $d$ . The capacitance  $C$  increases linearly with the area  $A$  since for a given potential difference  $\Delta V$ , a bigger plate can hold more charge. On the other hand,  $C$  is inversely proportional to  $d$ , the distance of separation because the smaller the value of  $d$ , the smaller the potential difference ...
