With the rapid popularization of electric vehicles (EVs), more charging and swapping facilities are needed to provide services. However, a single type of charging and battery swapping facilities cannot conveniently and rapidly meet the power supply demands of different types of vehicles at the same time. In order to solve this problem, a joint planning method of charging piles and ...

Company Introduction: Sunda New Energy Technology Co., Ltd was established in September 2014 with a registered capital of RMB 148.18 million. Technically supported by the School of material engineering of Central-South University, Sunda focus on R& D and manufacture of EV power battery pack, battery management system(BMS), EV charging piles(AC OR DC), ...

On your ground cable place a battery isolator (in your case a 150 amp or greater continuous solenoid). Then connect you inverter to the battery isolator. When your car is running switch the battery isolator so your deep cycle battery is connected to your starting and stopping battery. Your alternator will then attempt to charge both.
