Hi Guys, I connect to Oracle to query out the data appears garbled? How do I know what the data encoding is after I import my power BI data source? My database is coded as WE8ISO8859P1. I also tried the following code, but it didn't work, still garbled. = `Table.AddColumn(source, &quot;Customer column&quot;,...`

\*Edit - I've found the problem. Doing logic level analysis it turns out the baud rate of the prolific converter was about 9259, not 9600. The signals from the FTDI were reversed from that of the prolific and the ZigBee. (FTDI High Logic Level was 0, while Prolific High Logic Level was 1). I've searched the internet for the cause of this problem and the best I've been able to ...
