dc bias characteristics of ceramic capacitors 3 the physics of dc bias and temperature as 7000, while that of other ceramics, such as TiO_2 , is between 20 and 70. For these reasons, BaTiO_3 has become the best choice for manufacturing high capacitance multilayer ceramic capacitors. When the temperature is lower than the Curie point, one crystal axis (c-axis) elongates. The ...

output capacitors to meet the output-voltage-ripple requirements, whereas a smaller inductor may require more capacitors or capacitors with less ESR. Smaller inductors typically provide a better transient response. $L = 15.6 \mu\text{H}$ for this example. Choose an inductor that meets both the inductance and current requirements.

Bidirectional current-mode capacitor multipliers for on-chip DC-DC converter compensation are presented and it is demonstrated that a small capacitor is multiplied by a factor about 200, which allows the control system compensating circuit of DC-DC converter be easily integrated on a chip and occupy less silicon area.
