The repurposing of abandoned open-pit coal mines into pumped storage hydropower (PSH) can help with the storage of renewable energy, improve mine environments, and provide added economic value. Construction ...

Abstract. Human and animal exposure to hydrogen sulfide (H₂S) in animal barns has long been a serious issue due to the acute and chronic toxicity of H₂S. The H₂S concentration in the room air of deep-pit swine barns is usually within hundreds of parts per billion by volume; however, it can sharply increase to hundreds and even thousands of parts per million (ppm) during manure ...

Ontario Power Generation and Northland Power Inc. are looking to advance the 400 MW Marmora pumped storage project in Canada to convert an inactive, open-pit iron ore mine into a hydroelectric battery. Development of the Marmora Pumped Storage Project is a joint venture between the two power producers. Located in the Municipality of Marmora and ...

Whilst comparable deposition exists in the form of Iron Age deposits in "life giving" grain-storage pits (Cunliffe 1992; Hill 1995), deposition in deep pits and wells appears to only begin during ...

One of these was still in use in the 1960s, and the temperature of its water was a constant at 65°F -- an ambient temperature suitable for wine storage (Pritchard 1960: 27-28). The Iron Age II storage jars found in the bell-shaped pits had a capacity of 9.75 gallons, and it was calculated that these rock-cut bell-shaped wine cellars could ...

In Iowa, manure is largely stored in deep-pit storage systems. These deep-pits are located beneath the slatted floor of swine barns and functions to maintain the fertilizer value of the manure by reducing both the volatile loss and dilution of nutrients during storage (Key et al., 2011). However, the manures held in these deep-pits increase in ...

Foam production in deep-pit manure storages is a growing concern for the U.S. swine industry. Deep-pit manure storages are commonly used in Mid-western states to store liquid swine manure (for up to a year) prior to land application. Reports of extensive spontaneous foam production in these facilities have been increasing since the late 2000's.
