The average net upfront cost of a solar-plus-storage system is around \$28,879 based on the following calculation: \$29,926 (11 kW solar panel system) - \$8,978 (solar tax credit) + \$11,330 (10 kWh battery) - \$3,399 (battery tax credit) Total cost over 20 years: Solar + storage vs. natural gas generator

Battery storage does not emit localized pollution that is harmful to human health. Indeed, battery storage systems can reduce air pollution from conventional power plants or emergency backup generators that burn gasoline, diesel, propane, or natural gas, by reducing the need for these resources (see question 3).

Per UL standards, any battery that is installed for emergency lighting purposes must be able to power the lights for a full 90 minutes. OSHA standards state that the battery should be tested and expected monthly to ensure that it is holding a charge. If the battery cannot provide a full 90 minutes of power to the lights it must be replaced ...

Caution must be taken in Li-ion battery storage, use, management, and disposal due to the potential for fire and injury if these batteries are misused or damaged.
