When your solar panels produce more power than your household needs, your home storage battery will begin to charge. The energy stored will then be used to power your home appliances when the sun isn"t shining. Any energy that"s leftover can be sent to the grid for you to receive credits on your bill at your feed-in tariff rate.

In a well-managed grid, the spinning reserve can be 15-30% of capacity to be ready for surges in demand. Battery energy storage systems are tools that address the supply/demand gap, storing excess power to deliver it when it is needed.
