We see that this expression for the density of energy stored in a parallel-plate capacitor is in accordance with the general relation expressed in Equation ref{8.9}. We could repeat this calculation for either a spherical capacitor or a cylindrical capacitor--or other capacitors--and in all cases, we would end up with the general relation given by Equation ref{8.9}. Energy Stored ...

Standard DC charging guns typically handle currents below 250A, while super-fast charging guns can handle around 500A, generating significant heat at the contact points.
