The maximum charging power is also limited by the battery technology. Customers also want batteries with a large energy capacity to meet the long-range requirement. Because of its better energy and power density than other mobile battery technologies, the lithium-ion battery is the most popular in the EV industry.

For trucks in particular, battery swapping can have major advantages over ultra-fast charging. Firstly, swapping can take as little as 3-5 minutes, which would be difficult and expensive to achieve through cable-based charging, requiring an ultra-fast charger connected to medium- to high-voltage grids and expensive battery management systems and battery chemistries.
