2) Selection of liquid cooling plate types: Select based on the structure of the liquid cooling system and whether it can bear heavy loads 3) Determination of flow rate: Since the water-cooled system is relatively large, simulation analysis of the entire system is generally not performed.

The Kia Niro/Hyundai Kona use cooling plates and a liquid coolant fluid. These plates cool the lower edges of the pouch cells that are arranged in 5 large modules and hence 5 cooling plates. The two stacked modules at the rear of the pack appear to be fed from the two outer coolant plates in series.

and energy storage fields. 1 Introduction Lithium-ion batteries (LIBs) have been extensively employed in electric vehicles (EVs) owing to their high energy density, low self-discharge, and long cycling life.^{1,2} To achieve a high energy density and driving range, the battery packs of EVs often contain several batteries. Owing to the compact ...
