On November 10, 2020, the National Energy Administration published a list of its first batch of science and technology innovation (energy storage) pilot demonstration projects. The list of projects includes generation-side, behind-the-meter, and grid-side applications, as well as thermal-generation-

A: Residential Energy Storage (RES): Residential energy storage is an energy storage system for home or personal use that helps users increase their energy independence and cope with high electricity prices and instability by converting light energy into electricity and storing it to supply power at night or on cloudy days.

As everyone knows, photovoltaic (PV) power generation is volatility and intermittent. Power quality of PV power generation is greatly affected by weather, and it is difficult to be consumed completely with the large-scale grid connection. In this case, the value of energy storage can be fully reflected.

Aside from energy storage and flexible power generation, other methods of enhancing grid operational flexibility include improving transmission networks, demand-side energy management, and overgeneration of renewable energy sources. 59 These methods have been evaluated in the literature, 19, 21, 59 and comparing these options ...
