Other battery manufacturers are also racing to develop solid-state batteries, while existing lithium-ion technology continues to improve. Hussain acknowledges the competition but remains optimistic. "We"re confident that our technology represents a true step change in battery performance," he said.

The company asserts that this technology outperforms LiFePO4 (LFP) lithium-ion batteries and Sodium-ion batteries (NIBs) in terms of performance, safety, and cost-effectiveness. // Related Stories

Lithium ion batteries as a power source are dominating in portable electronics, penetrating the electric vehicle market, and on the verge of entering the utility market for grid-energy storage. Depending on the application, trade-offs among the various performance parameters--energy, power, cycle life, cost, safety, and environmental impact--are often ...

Over the years, lithium-ion batteries, widely used in electric vehicles (EVs) and portable devices, have increased in energy density, providing extended range and improved performance. Emerging technologies such as solid-state batteries, lithium-sulfur batteries, and flow batteries hold potential for greater storage capacities than lithium-ion batteries.

Wholesale Lithium-Ion Battery for PV Systems? Simply put, a lithium-ion battery (commonly referred to as a Li-ion battery or LIB) is a type of rechargeable battery that is commonly used for portable electronics and electric vehicles. The popularity of this kind of battery is also steadily growing for military and aerospace applications. In a lithium-ion battery, lithium ions move from ...

Lithium Batteries: Science and Technology is an up-to-date and comprehensive compendium on advanced power sources and energy related topics. Each chapter is a detailed and thorough treatment of its subject. The volume includes several tutorials and

After two years of joint research, the two claimed to have developed a new technology that significantly increases the life cycle of lithium metal batteries (LMB), or solid state batteries while ...

Prime Minister Sitiveni Rabuka''s visit to one of China''s major producer of lithium-ion batteries for electric vehicles (EVs) is a reminder of Fiji''s commitment to achieve net ...

Prime Minister Sitiveni Rabuka yesterday visited the Contemporary Amperex Technology (CATL) Ltd in Ningde City, Fujian Province. CATL is a global leader in the development and production of lithium-ion batteries, particularly for electric vehicles (EVs) and energy storage systems.

Most EVs today are powered by lithium-ion batteries, a decades-old technology that's also used in laptops and cell phones. All those years of development have helped push prices down and...

The price of lithium carbonate, the compound from which lithium is extracted, stayed relatively steady between 2010 and 2020 but shot up nearly tenfold between 2020 and 2022, spurring new ...

"This proof-of-concept design shows that lithium-metal solid-state batteries could be competitive with commercial lithium-ion batteries," said Li. "And the flexibility and versatility of our multilayer design makes it potentially compatible with mass production procedures in the battery industry.

The race is on to generate new technologies to ready the battery industry for the transition toward a future with more renewable energy. In this competitive landscape, it's hard to say which...

A brand new substance, which could reduce lithium use in batteries, has been discovered using artificial intelligence (AI) and supercomputing. The findings were made by Microsoft and the...

The new lithium-ion battery includes a cathode based on organic materials, instead of cobalt or nickel (another metal often used in lithium-ion batteries). In a new study, the researchers showed that this material, which could be produced at much lower cost than cobalt-containing batteries, can conduct electricity at similar rates as cobalt batteries.
