Furthermore, we demonstrate that a positive electrode containing $\text{Li}_{2-x}\text{FeFe}(\text{CN})_6 \cdot n\text{H}_2\text{O}$ ($0 \leq x \leq 2$) active material coupled with a Li metal electrode and a LiPF_6 ...

The key to sustaining the progress in Li-ion batteries lies in the quest for safe, low-cost positive electrode (cathode) materials with desirable energy and power capabilities. One approach to boost the energy and power densities of batteries is to increase the output voltage while maintaining a high capacity, fast charge-discharge rate, and long service life.

It has been reported that tuning the morphology or texture of electrode material to obtain porous electrodes with high surface area enhances battery capacities [1]. For example, mesoporous V_2O_5 aerogels showed electro-active capacities up to 100 % greater than polycrystalline non-porous V_2O_5 powders and superior rate capabilities compared to V_2O_5 ...

All modern lithium-ion batteries are based on the traditional electrochemical system in which lithiated oxides of cobalt, manganese and nickel are used as the active materials of the positive ...

Nature Materials - Delivering inherently stable lithium-ion batteries with electrodes that can reversibly insert and extract large quantities of Li^+ with inherent stability ...

Among the lithium-ion battery materials, the negative electrode material is an important part, which can have a great influence on the performance of the overall lithium-ion battery. At present, anode materials are mainly divided into two categories, one is carbon materials for commercial applications, such as natural graphite, soft carbon, etc., and the other ...

Supercapacitors and batteries are among the most promising electrochemical energy storage technologies available today. Indeed, high demands in energy storage devices require cost-effective fabrication and robust electroactive materials. In this review, we summarized recent progress and challenges made in the development of mostly nanostructured materials as well ...

Abstract Among high-capacity materials for the negative electrode of a lithium-ion battery, Sn stands out due to a high theoretical specific capacity of 994 mA h/g and the presence of a low-potential discharge plateau. However, a significant increase in volume during the intercalation of lithium into tin leads to degradation and a serious decrease in capacity. An ...

The development of efficient electrochemical energy storage devices is key to foster the global market for sustainable technologies, such as electric vehicles and smart grids. However, the energy density of state-of-the-art lithium-ion batteries is not yet sufficient for their rapid deployment due to the per

Rechargeable aprotic lithium-oxygen (Li-O_2) batteries have attracted significant interest in recent years owing to their ultrahigh theoretical capacity, low cost, and environmental friendliness. However, the further development of Li-O_2 batteries is hindered by some ineluctable issues, such as severe parasitic reactions, low energy efficiency, poor rate capability, short ...

Electrochemical properties of Li-excess electrode materials, $\text{Li}_{1.2}\text{Co}_{0.13}\text{Ni}_{0.13}\text{Mn}_{0.54}\text{O}_2$, with different primary particle sizes are studied in Li cells, and phase transition behavior on continuous electrochemical cycles is ...

Although Li-ion batteries have emerged as the battery of choice for electric vehicles and large-scale smart grids, significant research efforts are devoted to identifying materials that offer higher energy density, longer cycle life, lower cost, and/or improved safety compared to those of conventional Li-ion batteries based on intercalation electrodes. By ...

In modern lithium-ion battery technology, the positive electrode material is the key part to determine the battery cost and energy density [5]. The most widely used positive electrode materials in current industries are lithiated iron phosphate LiFePO_4 (LFP), lithiated manganese oxide LiMn_2O_4 (LMO), lithiated cobalt oxide LiCoO_2 (LCO), lithiated mixed ...
