

# Getting Started with Small Solar

If your goal is to save money, you can start by putting in place solar panels and an inverter. Solar panels will pay for themselves in electricity savings over a number of years. But with a grid-tied solar system, your solar power will not work during loadshedding. You can add batteries at a later stage if you're on a limited budget.

Getting Started. Getting started with solar power is moderately simple and can be handled by most do-it-yourself warriors as a weekend project. Some of the components you will need for a solar starter kit include: Solar panels - Make sure they are UL certified and have a 25 year performance warranty.

Getting started with SCAPS SCAPS (a Solar Cell Capacitance Simulator) is a simulation program developed at ELIS, University of Gent. The presentation here is based on version 3.0, March 2010. 0. The basics SCAPS is a Windows-oriented program, developed with LabWindows/CVI of National Instruments. We use here the LW/CVI terminology of a "Panel ...

To start your solar panel setup, you need solar panels, a battery, a charge controller, an inverter, and cables. Here is how to connect it all together.
