However, if the distributor sets the transformer voltage too high, houses close to the transformer may sometimes experience voltages above the maximum allowed 253 V, which also risks damaging appliances.

From the market point of view it means that energy is stored at times of low-energy prices (low load) and injected to the grid at times of high prices. The benefit for the source owner can be in saving energy delivered from the grid to cover his demand. As regards big wind farms supplying energy to the grid, it also means economical profits.
