Battery, in electricity and electrochemistry, any of a class of devices that convert chemical energy directly into electrical energy. Although the term battery, in strict usage, designates an assembly of two or more galvanic cells capable of such energy conversion, it is commonly applied to a

Lead-acid batteries have a relatively low energy density compared to modern rechargeable batteries. Despite this, their ability to supply high currents means that the cells have a relatively large power-to-weight ratio. Lead-acid battery capacity is 2V to 24V and is commonly seen as 2V, 6V, 12V, and 24V batteries. Its power density is 7 Wh/kg.
