**Mounting the Solar Panels:** Our team securely installed the solar panels on the roof, ensuring optimal orientation and tilt for maximum sunlight exposure. **Connecting the Inverter:** We connected the solar panels to a hybrid inverter, which converts the DC electricity generated by the panels into AC electricity compatible with the grid.

The goal of most solar projects is to offset your electric bill 100%, so your solar system is sized to fit your average electricity use. Here's a basic equation you can use to get an estimate of how many solar panels you need to power your home:  $\text{Solar panel wattage} \times \text{peak sun hours} \times \text{number of panels} = \text{daily electricity use}$

**Step 1:** Find out how much electricity you use. Check your most recent power bill to see your monthly electricity consumption. The total amount of electricity used is usually shown at the bottom of the bill in kilowatt-hours (kWh).. Your electricity usage is the biggest deciding factor in how many solar panels you need.

Whether using a single solar panel to power a small device or an entire array, the voltage may drop when engaged if the solar panels are not fully charged and producing power at their peak capacity. Issues that can cause a solar panel to not perform at ...

Storing excess energy has many benefits for homeowners who have solar panels.
