If you know the number of PV cells in a solar panel, you can, by using 0.58V per PV cell voltage, calculate the total solar panel output voltage for a 36-cell panel, for example. You only need to sum up all the voltages of the individual ...

When we connect N-number of solar cells in series then we get two terminals and the voltage across these two terminals is the sum of the voltages of the cells connected in series. For example, if the of a single cell is 0.3 V and 10 such cells are connected in series than the total voltage across the string will be $0.3 \text{ V} \times 10 = 3 \text{ Volts}$.

The maximum voltage that a solar panel has is called open circuit voltage when the load is not connected. 8 to 12 Voc is for 36 solar panel cells in general. Maximum power voltage. At maximum power of solar panels, the voltage is known as maximum power voltage. The general value of V_{mp} under load is 12 to 14 V. Nominal voltage
