commercial and residential applications. The most common application of solar energy collection outside agriculture is solar water heating systems. This case study focuses on the design of a ground mounted PV solar panel foundation using the engineering software program spMats. The selected solar panel is known as Top-of-Pole Mount (TPM),

For an efficient usage of the solar energy, the Solar panels should absorb energy to a maximum extent. This can be done only if the panels are continuously placed towards the direction of the Sun. So, solar panel should continuously rotate in the direction of Sun. This article describes about circuit that rotates solar panel.

A solar cell is an electrical device that converts the energy of light directly into electricity by the photovoltaic effect, which is a physical and chemical phenomenon. The common single junction silicon solar cell can produce a maximum open-circuit voltage of approximately 0.5 V to 0.6 V. Individual solar cell devices are often the
