

How to install the battery glue

P.S. I got the battery and cover because the old cover was warped and separated, figured may as well replace the battery in a 2-year-old phone. Turns out, the battery was swollen and huge and it had pushed the back cover open. Not a good situation. So if your back cover is coming off, suspect that battery.

For me, actually replacing the battery wasn't too bad, but I ended up using too much isopropyl to clean off the old glue, and it seeped under the display and ruined it. Wish Apple didn't use so much glue. It massively impedes repairability, which is not very environmentally sound. My iPad was perfect apart from the battery - it's now got ...

Install the other end of the cable with a clip or new panel. Most of the time, you merely need to run the cable to another cable clip on your electronic device. To attach the other end of the clip, repeat these steps by popping the second clip up and sliding the other end of the cable into the slot before closing it.

There is even a chance for the battery ribbon cable to be cut from this too. Additionally if these phones came from clients or customers the chances are you will see them come back and complain about the battery moving because they can hear and feel the battery moving around. You have a few options on what kind of adhesive you want to use.
