Solar energy, wind energy and ocean energy are intermittent new energies, while the rest are non-intermittent new energy sources [19]. Among these new energy sources, solar energy and wind energy have now been widely used throughout the world, which can supply approximately 3% of the world's primary energy consumption [20].

o Energy or Nominal Energy (Wh (for a specific C-rate)) - The "energy capacity" of the battery, the total Watt-hours available when the battery is discharged at a certain discharge current (specified as a C-rate) from 100 percent state-of-charge to the cut-off voltage. Energy is calculated by multiplying the discharge power (in Watts ...
