IMMERSIO XM28 boasts twice the energy density of LFP batteries, thanks to advanced ternary lithium chemistry, optimizing space utility and immersion cooling system. This translates to double range and extended battery lifespan, and reducing costs for electric commercial vehicles, making it a compelling choice for the growing electric commercial vehicle ...

Yao et al. showed that the immersion cooling approach offered an excellent cooling effect during fast charging conditions of the battery pack. A 5 mm distance between the ...

XING Mobility, a global pioneer of immersion cooling battery technologies, today announces the launch of its latest product, the IMMERSIO(TM) XM28, at IAA Transportation 2024, focusing on the ...

The benefits of immersion cooling for EVs Optimum safety: fire protection system EXOES has developed an immersion cooling technology that prevents the spread of thermal runaway inside the battery. In the event of a battery cell failure, its energy is efficiently ...

Immersion cooling, which submerges the battery in a dielectric fluid, has the potential of increasing the rate of heat transfer by 10,000 times relative to passive air cooling.

The current oil-immersed battery cooling system validates the concept of direct-contact cooling method through model-scale experiments and theoretical considerations, which provides novel insights ...

Flow mode optimization is an essential way in improvement of BTM performance based on immersion liquid [26]. For cylindrical battery modules, the voids arising from the inherent shape of the batteries inherently yield flow channels. Liu et al. [27] designed net-like flow channels according to the structure characteristics of 18650 battery.

Conversely, prismatic batteries, characterized by their larger volume and lower thermal conductivity, face challenges in dissipating heat. Metal foam is employed to address these challenges in prismatic battery immersion cooling systems. The effectiveness of

Efficient cooling during rapid battery charging/discharging necessitates forced circulating flow in immersion cooling systems. However, under forced flow immersion cooling (FFIC), the comprehensive impact on the electrical and thermal performance of battery modules remains inadequately explored.

Exoes propose des solutions de refroidissement par immersion pour batteries, garantissant une recharge rapide, une sécurité accrue et une durée de vie prolongée des cellules. Notre expertise en fluides diélectriques et conception de modules assure des performances optimales pour divers types de cellules.
