The impedance of a capacitor is given by the equation  $Z_C = \sqrt{R_C^2 + X_C^2}$ , where  $R_C$  is the resistance. The impedance of a capacitor decreases as the frequency increases, making it more conductive to AC signals. Capacitors also have the ability to store energy temporarily and release it when needed.

A radio has an LC circuit inside. The inductance is  $L = 60$  mH. The broadcast signal to receive has a frequency  $f = 1$  MHz. Ignore regular resistance. High impedance  $Z$  means low signal received. The capacitor setting, instead of at resonance, now has  $C = 316$  pF (10-12 F). The impedance becomes \_\_\_\_\_  $\Omega$ .

The voltage at node A1 represents the total voltage drop across the test circuit, while node A2 is the drop across the capacitor under test. As expected for a series RC circuit, the voltage across the capacitor lags behind the total circuit voltage by the phase angle  $\theta$ . The impedance of the capacitor under test can be found using Equation 1.

Back up in Chap. 1, we studied basic concepts like charge (quantity of electrons), current (rate of electron flow), and voltage (energy per electron). Two other important concepts are that of an E field (measured in volts per meter) and that of a B field (a magnetic field associated with current flow).. These quantities are associated with three fundamental circuit parameters, ...

Inductance is a property of a conducting wire wound in the shape of a coil that opposes any change in the current flowing through it. According to Faraday's law of electromagnetic induction, changing current induces an emf (electromotive force) in the coil. The magnitude of the emf is proportional to the rate of change of current.

A word about signs: The higher potential is always on the plate of the capacitor that has the positive charge. Note that Equation ref{17.1} is valid only for a parallel plate capacitor. Capacitors come in many different geometries and the formula for the capacitance of a capacitor with a different geometry will differ from this equation.
