Energy in rotational motion is not a new form of energy; rather, it is the energy associated with rotational motion, the same as kinetic energy in translational motion. However, because kinetic energy is given by $K = \frac{1}{2} m v^2$ and velocity is a quantity that is different for every point on a rotating body about an axis, it makes sense to find a way to write kinetic energy in ...

The adjective kinetic has its roots in the Greek word *kinisis* *kinesis*, meaning "motion". The dichotomy between kinetic energy and potential energy can be traced back to Aristotle's concepts of actuality and potentiality.[3] The principle in classical mechanics that $E = \frac{1}{2} m v^2$ was first developed by Gottfried Leibniz and Johann Bernoulli, who described kinetic energy as the ...
