Most AC units will need to have both capacitors replaced at the same time. Models that run on only a single capacitor do exist, but they are in the minority and are usually low-powered options. In many cases, you will notice that capacitors are sold in packs of two. This is by design, since capacitors should always be replaced in pairs.

If the voltage across the capacitor is changed, the capacitor will either charge or discharge until it reaches the new voltage. The time taken for the capacitor to charge or discharge is determined by the capacitance of the capacitor and the resistance of the circuit. This dynamic behavior is crucial for many applications, as it allows ...

I'm trying to make my first PCB but I'm having trouble finding parts like resistors, capacitors, etc from local stores. Call me old fashioned but I'm not a huge fan of ordering online because I like to just go out and just get the parts instead of waiting a few weeks. I've already checked places like GigaParts and Hobby Lobby type stores.
