The fundamental elements of the lead-acid battery were set in place over 150 years ago. In 1859, Gaston Planté was the first to report that a useful discharge current could be drawn from a pair of lead plates that had been immersed in sulfuric acid and subjected to a charging current, see Figure 13.1. Later, Camille Faure proposed the concept of the pasted plate.

Install the low voltage lead-acid battery hold down and use a 10mm socket to tighten the nut that secures it to the battery. Torque the nut to 6 Nm (4.4 ft-lb). Reconnect the first responder loop. Remove the protective caps from the positive (+) and negative (-) posts on the new low voltage lead-acid battery.
