It takes about 24hours to fully charge a 70Ah battery. If your supply does not do over-current gracefully (it overheats or blows fuses), then you have two options: The first is to measure the battery terminal voltage before connecting to the supply. Say it is 12.0V (mostly discharged). Set the supply to an open-circuit voltage of 12.0V, and ...

We are having Lithium-Ion battery with below specification, Charging voltage - 16.8V Charging Current - 1.38A avg; 3.45A max. If we provide above voltage and current from a regulated power supply directly to batteries +ve & -Ve will it charge properly without any issue. Note: This battery internally having an BMS. Kindly clarify

A standard switching power supply is a constant voltage power supply, so it monitors fluctuations in output voltages, inputs the results in the control circuit, and executes constant ...

We use a battery holder for our battery because the battery holder gives us two leads (one negative and one positive) so that we can connect it to the DC power supply via 2 alligator clips. Without the battery holder and its leads, it would be very difficult to allow for connection with the battery cell. So if we are charging a single "AA" battery, we need a single "AA" battery holder. ...
