Rechargeable batteries Li-ion batteries are now used in very high volumes in a number of relatively new applications, such as in mobile phones, laptops, cameras and many other consumer products. The typical Li-ion cells use carbon as the anode and LiCoO_2 or LiMn_2O_4 as the cathode. as the cathode.

With the reduction of manufacturing costs of the lithium-ion batteries, the demand for electrochemical energy storage is increasing [3], [4]. Lithium-ion battery safety is one of the main reasons restricting the development of new energy vehicles and large-scale[5].

The difference between soft and hard lithium batteries mainly refers to the material of the lithium battery shell, if there is packaging outside, it is not easy to see, you must see the battery body, the weight of the steel-shell battery will be more than the same
