By rapidly predicting ideal manufacturing conditions, our method enhances battery performance and efficiency. This advancement can significantly impact electric vehicle technology and large-scale energy storage, contributing to a sustainable ...

Lithium-ion battery manufacturing demands the most stringent humidity control and the first challenge is to create and maintain these ultra-low RH environments in battery manufacturing plants. Ultra-low in this case means less than 1 percent RH, which is difficult to maintain because, when you get to <1 percent RH, some odd things start to happen.

For example, ~2100 papers on high-rate/power LIBs were published in 2012 one year, while ~4700 new papers were published in 2019 (source:, topic "high power lithium ion battery/batteries" or "high rate lithium ion battery/batteries"). However, there is no review paper on high-rate/power LIBs until 2012.

The applications of lithium-ion batteries (LIBs) have been widespread including electric vehicles (EVs) and hybridelectric vehicles (HEVs) because of their lucrative characteristics such as high energy density, long cycle life, environmental friendliness, high power density, low self-discharge, and the absence of memory effect [[1], [2], [3]] addition, other features like ...
