Si le lithium reste le composant principal des batteries électriques, le sulfate de manganèse se fait une place de plus en plus importante.

Over the past few years, the development of lithium (Li)-ion batteries has been extensive. Several production approaches have been adopted to meet the global requirements of Li-ion battery products. In this paper, we propose a scaled-up process for the $\text{LiNi}_{0.6}\text{Mn}_{0.2}\text{Co}_{0.2}\text{O}_2$ (NMC622) cathode material for high performance Li-ion batteries. During each synthesis step, ...
